

At nest 2, with the live stream camera, we have been watching juvenile Poul 2E3 regularly feeding. He is still receiving fish from his dad FKO and sometimes his mum Camilla. He is also fitted with a satellite tag and we can see from the data that he is now widely exploring the area. It is interesting to see that this young osprey is checking out water bodies too. He has been to Portmore Loch on 13th August, he has visited Loch Eddy at the Glen Estate and he spent some time at Ale Moor Loch on 15th August before stopping there for a while, possibly indicating that he has begun fishing for himself.
